Cell Signaling

Safe, Effective, Non-invasive, treatment for Neuropathy, Pain, Inflammation, Circulation and Neuromuscular Rehabilitation. Cell Signaling treatments are FDA cleared and reimbursable from your insurance carrier - including Medicaid and Medicare. National Neuropathy Center is proud to offer this advanced pain treatment option.

How Cell Signaling Treatment Works

Automatically adjusting types of programmed electrical & electromagnetic currents in conjunction with a micro injection cocktail of vitamins and minerals necessary to rebuild nerves and blood vessels are applied in appropriate areas. The cell signaling currents are pre-programmed based on your diagnosis. How the currents vary depends on the diagnosis of your pain. The varying currents along with the injected vitamin / mineral cocktail work to repair damaged nerves and blood vessels.

What this means for you is this is leading edge peripheral neuropathy treatment and management based on Quantum Physics principles and how they can be applied practically to help people. If you have neuropathy we may just have the remedy.

How Can Cell Signaling Help Me?

Peripheral Neuropathy
 Acute and Chronic Pain Conditions
 Symptomatic Relief of Intractable (long term) Pain
 Supporting Treatment for Post-Traumatic Pain Syndromes
 Supporting Treatment in Post-Surgical Pain Conditions
 Relaxation of Muscle Spasms
 Slow or Prevent Muscle / Nerve Atrophy Due To Inactivity
 Cell Signaling Treatments may be combined with other Adjunct Treatments such as Trigger Point Injections for the most Comprehensive Approach

What To Expect

All New Patients would undergo a Complete Evaluation in our center prior to developing a plan involving cell signaling. A typical cell signaling session last about 30 minutes. You may reasonably expect a plan consisting of 2 to 3 treatments a week for 8 to 12 weeks. Many patients have reported noticeable improvement with their pain after just a few sessions. There are no side or after effects so you are free to drive home.
